

## Seamless turnkey install for Kendal Nutricare's new evaporator

### Key challenges

Being established since 1962 and providing baby milk products throughout the UK & overseas, Kendal Nutricare recognised the need for a trusted installation partner familiar within the food & beverage sector due to the high hygiene and quality standards and critical nature that production must be maintained. With Actemium completing the electrical, mechanical & automation installation works for a new Evaporator as a turnkey solution, all parties worked together to minimise challenges and maintain milk production at the site.

### Benefits

Installation of a new Evaporator to support rising sales demands

Maintained uninterrupted production operations throughout installation

Single point engineering contact liaising direct with customer and Actemium parties

### Change

The project goal for Actemium was to supply & install a new Evaporator to increase production demands at site with unrivalled quality and providing Project Management to deliver a turnkey solution (Electrical, Mechanical & Automation).

- Experience of Evaporator installation enabling reduced design, installation and commissioning costs.
- Site Supervision & Health & Safety co-ordination
- Installation of new Evaporator supplied by manufacturer
- Stainless steel containment and support structure
- Control cabling and associated power supplies
- LED lighting within the area on completion
- Automation to link process to existing production and knowledge for integration of existing KNC legacy systems and new hardware.

*"Actemium delivered a seamless turnkey solution for our evaporator installation, expertly managing electrical, mechanical, and automation works with minimal disruption. Their understanding of our sector's high standards made them a reliable partner for quality and efficiency."*
